

LITEPAPER

OCTOBER 2020

YSEC

You earn, we SECure

INTRODUCTION

Why YSEC

DeFi is generating a lot of hype and is a space that is undergoing increasing popularity.

Absolutely desirable, but at the same time it is becoming increasingly difficult to safely invest into new projects because of increasing chances of the team not being sincere and the possibility of them leaving the project behind, be it a rug pull or a (slow) exit scam.

Currently developers have to connect with Unicrypt and TEAM to lock their assets and have to add the promised liquidity on Uniswap (you hope!) themselves, YSEC will offer token locking, ether locking, liquidity locking, liquidity adding solutions and will also launch presales added by the developers creating them.

Want to know best part of all?

It's a fully automated process and YSEC will never own any of the assets locked within our smart contracts.

Once published, investors will be able to see when and which projects are having their presale as well as how the tokenomics of that specific project are organized.

Tokenholders can stake their YSEC in the YSEC farming pool after our presale has ended. When our presale platform is live, tokenholders can also stake their YSEC to earn dividends based on fees generated by the platform.

MARKET STABILIZATION

YSEC for YSEC

At the time of the presale, our platform will not yet be up and running. We are working hard to launch our YSEC platform in the beginning of Q1 - 2021. In an attempt to prevent a dumping market we decided to add a YSEC to YSEC farm where token holders can stake their YSEC to earn more YSEC in return.

When our hardcap is reached, 300.000 tokens will have been sold. 200.000 tokens will then be added to the staking pool.

Immediately with the launch of our platform we will also be launching a dividend staking pool. Token holders will be able to earn a part of the fees generated in ether by vesting their tokens here.

PLATFORM LAUNCH

Now what!?

When our platform is live, it can be used by everyone. Developers can use our platform to set-up their presales and will have the opportunity to customize it to their needs. One can for example add team, development and marketing allocations and decide whether this allocation should be locked, unlocked or have a time-lock (releasing an X-amount of tokens each month). Setting up a presale contract will also require the developer to decide on the liquidity that will be added and locked on Uniswap and needs to allocate both the ether and the token part to be able to continue.

Investors will be able to see all published presale contracts as well as the tokenomics set within. This means that our platform offers full transparency to everyone. Anyone can set up their presale, but you (the investor) decides if the contract is to your liking.

FUTURE OF THE YSEC PLATFORM

Staking your YSEC

The most interesting part of our platform for tokenholders, is the dividend pool our platform will provide.

A standard tokenomic within the pre-sales launching on our platform, will be a 5% base fee in ether raised. Half of this will be used to continue developing the platform. The other half however will be added to the dividend pool where YSEC stakers will be rewarded in ETH.

To give an insight into what this might mean for YSEC tokenholders, we used the data from a platform we are aiming to be a direct competitor of: Bounce.

Using the total amount of ETH that came through Bounce in the past few months, we can calculate the earnings the pool would divide if the YSEC platform is going to be used in the same frequency.

Bloxy shows the following info:

 Ether  628,318.50

A total of 628.318 ETH has been transferred to developers using Bounce as their pre-sale platform. When translated to the YSEC platform that would mean 15.708 ETH would have been added to our YSEC - ETH dividend pool, representing a total value of **5.8million USD** in a timeperiod of just **3 months**.

Our dividend pool is a bullish tokenomic and is integrated to use our community as a marketing catalyst. The more projects decide to launch through YSEC, the more ETH will be added to our dividend pool.

Because our community is rewarded for presales launched through YSEC, it will, in turn, make sure there will be a lot of exposure.

Why? The more exposure, the more projects launch through YSEC, the more our tokenholders will earn.

Hence our motto: "**You earn, we SECure**".
